# **SUSO** Super Solution **RING MAIN UNIT**

SF<sub>6</sub> Gas Insulated Ring Main Units

## Based on maximizing efficiency and reliability of the power technology helps offering optimized solutions for your environment

Susol RMU is enable to install on medium voltage distribution network and mainly used for protection of transformers in compact substations. It is used for medium voltage distribution in compact substations, small buldings, residential housing complex, large shopping malls, airports, wind power, and solar power comprising medium voltage networks.

Susol

-

## **Certified Quality**

STL (The Short-Circuit Testing Liaison, KERI), ISO 9001, ISO 14001 LS has integrated a functional organization into each of its units, the main purpose of which is to check quality and ensure the adherence to standards.

SF6 Gas Insulated Ring Main Units

Susol RMU is a compact ring main unit combining all MV functional units to enable to supply and protect transformers on the secondary distribution network. Susol RMU can be supplied in various and different configurations suitable for most switching applications in 12/17.5/24kV/36kV distribution networks

#### Technology

- Metal enclosed unit for indoor installation and type tested.
- Insulated by SF<sub>6</sub> Gas.
- Maintenance free and easy installation.
- Independent of climate.
- ON-OFF-Earth, 3-position load break switch

## Safety

- Approachable and operable safety in the presence of power in the cables.
- Clear indication of operation status via mimic diagram on front panel.
- Fully automatic interlocking system.
- Operation is only possible in case door is totally closed.
- Fuse compartment is only accessible when Load break switch is earthed.
- Voltage detector to check whether cables are lined or not
- Internal arc withstand is tested for the operator safety in case of accident current occur.

## **Durability and usefulness**

- Metal enclosed tank is hermetically sealed, it means this is independent of environmental effects such as dirt, small insects, moisture and so on.
- Load break switch operating is possible in the front of Ring Main Unit.
- All switching operations can be made safely to personnel because of interlocking system that operates automatically according to the switch position by the operator.
- No requirement of recharging SF<sub>6</sub> gas until its service life.
- Remote operation available in case of using motor operating mechanism and RTU.
- HRC power fuse will trip the mechanism automatically by a fuse striker pin connected to mechanism in the event of fault happening.

## Saving cost

- No maintenance is required other than replacement of HRC power fuse after installation.
- Compact design that requires minimum space to install and operate locally is main advantage especially where the space is limited.

#### SF6 Gas Insulated Ring Main Units

#### Network remote control for DAS / SCADA

Equipped with RTU (remote termination unit), the Susol RMU switchgear can implement intelligent application. Connecting all the IRMUs by a communication network, it enable to monitor and control the switchgear remotely, locate and isolate

faultautomatically as well as the system recovery.

This will dramatically reduce the affected area and duration of blackout, and realize the high reliability and excellent power quality.

#### **RTU(Remote Terminal Unit)**

- Equipped with RTU (Remote Terminal Unit), the susol RMU switchgear can implement intelligent application. connecting all Susol RMU with communication network, it enables to monitor and control the switchgear remotely.
- The remote terminal unit (RTU) collects data from field instruments & sensors and transmits the information to the Supervisory Control and data acquisition system (SCADA) installed in a central control room through communication systems and lines, and receives control commands from the telemeter telecontrol system to conduct online controls in real time.

#### **System configuration**

Susol RMU equipped with RTU provides all the functions needed to operate the MV network in real time

## Standard / Optional features

#### Standard features

- Circuit Breaker with 21kA interrupting capacity for the transformer and line protection
- 3-position DS disconnecting and earthing switch
- Switch position indication for CB and DS / ES
- Cable bushing horizontal in front
- Interlocking between CB and DS / ES

#### Optional features

- Motor operation for Circuit Breaker
- Auxiliary switches
- CB position
- Disconnector position
- Earthing switch position
- Voltage indicating system
- Trip coil and close coil

Vacuumm interrupter

In the closed position, normal current flows through the interrupter. When a faultoccurs and interruption is required, the contacts are quickly separated. The arc drawn betweenthe surfaces of contact is rapidly moved around the slotted contact surface by self induced magnetic effects, preventing gross contact erosion and the formation of hot spot on the surface. The arc burns in an ionized metal vapor, which condenses on the surrounding metal shield. At current zero the are extinguishes and vapor production ceases. The metal vapor plasma is very rapidly dispersed, cooled, recombined, and deionized, and the metal vapor products are quickly condensed so that the contacts withstand the transient recovery voltage.

※ Note

SIND(Ground fault protection) normally operates when the sum of the RMS current of each phase measured by OCR is more than 90% of the minimum set value to the direction of P1 → P2 of the connected CT.

- If the sum of the RMS current of each phase at cold state is less than 2 times of the minimum set value, the absolute error of ±200ms should be added to the basic error

#### Operating characteristic

#### 51T characteristic

The function for overload protection which has definite time characteristic and time delayed in inverse ratio to fault current.

- 3. Operation current based on the largest one of the three phases

#### **51ND characteristic**

Ground fault protection function provides trip signal at the set values for pickup current and time delay.

- 1. Standard current setting Knob: IE> - Setting range : (0.2-0.3-0.4-0.5-0.6-0.7-0.8-0.9-1-1.2-1.4-1.6-1.8-2-2.5-NA)\*In
- 2. Time delay setting Knob: tlE> - Setting range: 0.1-0.2-0.4-0.6-0.8-1-1.5-2-2.5-3-3.5-4-6-8-10-20 sec
- 3. Ground fault current = Vector sum of the three phases (R+S+T)

## **CT (Current Transformer)**

Rating		Specification
Max. system voltage	kV	0.6
Primary current	А	7.2/14/4/28.8/57.6/115.2/230.4
Secondary current	А	0.075
Rated burden	VA	0.1
Accuracy class		10P80
Short time-current	KA/3s	21
Rated frequency	Hz	50/60

## **Voltage indicator lamps (Voltage Detector)**

It is a device to check the presence or absence of voltage in the cables. It is conforming to IEC standard 61958. Push button type LED voltage indicator is provided and lamp power is supplied by bushing type capacitive dividers.

## **Power Fuse**

- 1. The LS HRC power fuses belong to the PRIME MEC series. It interrupts high currents before the peak value and therefore cuts down the required withstand capacity of the associated equipment on the electric system.
- 2. Though small in size, it has a high breaking capacity and its enclosed type is suitable for use inside of the panel board.
- 3. PRIME-MEC fuses are equipped with striker pins for trip indicators as well as for inflicting impulse to trip link of related load break switches

Selection of fuses : According to IEC 60787(24kV)

Transformer rating capacity (kVA)	Power Fuse rated current (A)	Transformer rating capacity (kVA)	Power Fuse rated current (A)
36 ~ 75	5	464 ~ 840	40
75 ~ 157	10	598 ~ 1048	50
172 ~ 358	20	745 ~ 1320	63
258 ~ 538	30	1000 ~ 1572	75

Note) Please ask fuse maker for optimum selection of fuses.

# Power fuse characteristic curve

## **Optional components for LBS / F-LBS mechanism**

A contact used for remote control of LBS/F - LBS ON/OFF/EARTH status. The auxiliary contact consists of 2a2b. (However, when operating an electric motor, it consists of 1a1b.)

12 / 17.5 / 24 / 36kV RMU LBS Auxiliary Contact       Type     Resistive load     Inductive load       Minimum current     DC5V, 1mA       490V     50     2.50

	DC	125V	10A	6A			
		30V	10A	10A			

## Under Voltage Trip device: Instantaneous type (Under Voltage Trip device: UVT)

## • A device that automatically trips CB when the main line or control power voltage drops below the defined range. It is attached inside a circuit breaker.

- When no control power is supplied to UVT, CB's electrical and mechanical closing is not possible. For CB tripping, 65~85% of the rated voltage should be applied to both ends of the UVT coil.
- When the UVT Coil is selected, a double trip coil cannot be chosen. Thus, the trip coil location should be changed
- Dual trip coil can not be selected when UVT coil is selected and the trip coil position must be changed

12/17.5/24/36kV RMU CB UVT Coil										
Rated voltage (Vn)		Operating vol	tage range(V)	Power consum						
DC(V)	AC(V)	Pick Up	Drop Out	Inrush	Steady-state	Trip time (ms)				
24~30	-	0.65~0.85 Vn	0.4~0.6 Vn			50				
48~60	48			200						
100~130	100~130			200	<u> </u>					
200~250	200~250									

Note) Operating voltage range is the minimum rating standard of each rated voltage (Vn)

## CB Remote Reset Switch: RES (Remote Reset switch: RES)

- It is an optional attachment that resets a circuit breaker in remote places when CB trip has occurred by OCR(Over Current Relay) owing to fault current.
- When a trip alarm(AL) switch is used, CB trip occurs. For CB re-closing, the circuit breaker should be mechanically reset. such mechanical reset operation is possible with a switch in remote places.
- When the circuit breaker is reset with a micro-switch inside the circuit breaker, it automatically breaks the current supplied to the coil inside a remote reset switch(RES). For safety, it is recommended to use a push button switch the operation switch. <Recommended specifications of the push button switch> (resistive load)
- AL2 and RES cannot be used simultaneously. Thus, there is only one option, either AL2 or RES.

12/17.5/24/36kV RMU CB RES Coil								
Rated voltage (Vn)	Operating current (Max)		Operating time					
AC 110~130V	AC	6A	40ms or less					
AC/DC 110~125V	DC	5A						
AC/DC 200~250V	AC / DC	3A						

## UVT coil rated voltage and characteristics

Rated voltage and operating current of

RES

## **CB-Trip alarm contact (Trip Alarm Contact: AL)**

- When a Circuit Breaker is tripped by OCR which operates against the fault current(Over Current Relay), Trip Alarm switch provides the information regarding the trip of Circuit Breaker by sending the electrical signal from the mechanical indicator on main cover of main Circuit Breaker or internal auxiliary switch. (Installed at the inside of Circuit Breaker)
- When a Circuit Breaker is tripped by fault current, a mechanical trip indicator(MRB, Manual Reset Button) pops out from the main cover and the switch(AL) which sends control signal electrically is conducted to output the information occurred from fault Circuit Breaker
- MRB and AL can be operated only when tripped by OCR, but doesn't be operated by Off button and OFF
  operation of trip coil.
- To re-close a Circuit Breaker after a trip, press MRB to reset it for closing.
- 2pcs of electrical trip switch(AL1, AL2, 1a) are provided(Option)
- Trip alarm contact and MRB(Manual Reset Button) need to be purchased together
- AL2 and RES cannot be used simultaneously. Thus, there is only one option, either AL2 or RES

#### Electrical characteristics of a trip alarm contact

12/17.5/24/36kV RMU CB Trip Alarm Contact						
Rated voltage (A)	Non-inductive load(A)		Inductive load(A)		Inruch current	
	Resistive load	Lamp load	Inductive load	Motor load	infusit current	
8V DC	11	3	6	3		
30V DC	10	3	6	3		
125V DC	0.6	0.1	0.6	0.1	Max. 24A	
250V DC	0.3	0.05	0.3	0.05		
250V AC	11	1.5	6	2		

## **MRB (Manual Reset Button)**

- It is a function which resets a Circuit Breaker manually when a Circuit Breaker is tripped by OCR.
- When a Circuit Breaker tripped by fault current, a mechanical trip indicator (MRB, Manual Reset Button)pops out from the main cover and the switch(SDE) which sends control signal electrically is conducted to ouput the information occurred from fault Circuit Breaker.
- MRB can be operated only by OCR but not by OFF operation of Circuit Breaker, To re-close a Circuit Breaker after a trip, press MRB to reset it for closing.
